## **World Transport Reports Edition 2010 / 2011**

**Passenger and goods transport in  
Europe and abroad:  
Forecasts up to 2025**

The new ProgTrans World Transport Reports provide forecasts of European and overseas socio-economic and transport developments up to 2025, covering all EU Member States and 13 additional countries worldwide.

Sound forecasts are an indispensable condition for taking strategic decisions which require special care because of their long-term effect. For this reason we have paid particular attention to creating a comparable and consistent data base as well as to the interdependence of socio-economic and transport sector developments.

For many years, our various Transport Reports have served decision makers in businesses and governments as reliable bases for shaping the future. Since the future of the World will be shaped to an important extent by transport developments we now offer you the new World Transport Reports. Using consistent data, sound analysis and a proven forecast procedure, the World Transport Reports Edition 2010 / 2011 will show you the most important development trends in the demand for passenger and goods transport services up to the year 2025.

For the fifth time ProgTrans AG will issue long-term forecasts now for 40 countries all over the world. The new ProgTrans World Transport Reports will be published in the second quarter of 2010 in two volumes: Volume I includes the 27 EU Member States + Switzerland, Volume II contains 13 additional countries (incl. Switzerland) worldwide, thus also covering the BRIC countries. The forecast horizon is now the year 2025.

The ProgTrans World Transport Reports provide comprehensive data analyses and forecasts of the most important indicators of passenger and goods transport, as well as their socio-economic determinants. It focuses on transport demand in terms of passenger- and tonne-kilometres between 2000 and 2025, for land transport modes and types of transport. The development of modal split is also analysed. In addition the mileage of road and rail transport is shown as well as the road vehicle stock. Air transport covers loaded and unloaded freight and departed passengers.

To obtain the new World Transport Reports Edition 2010 / 2011 at the earliest date, subscribe now and fill in the form on the back of the flyer.
